

To whom it may Concern

Shaukat Khanum Memorial Cancer Hospital and Research Center (**SKMCH&RC**) being one of the leading cancer hospital and research center and having state of the art IT infrastructure, took an initiative to identify the risks related to our IT Infrastructure and make sure the security of most sensitive data of our patients records.

Based on Technical Expertise of the consultants, **INFOGISTIC** was selected to perform this task. Consultants were engaged with Shaukat Khanum IT Security team to perform below mentioned tasks:

- Identify and communicate the security vulnerabilities and risks to which IT infrastructure is prone to from both outside and inside
- Review Network Design with respect to information security
- Provide recommendations based on the identification of security vulnerabilities and review of network design.

INFOGISTIC team performed these tasks using the technical expertise along with different tools. Team also followed international best Standards and Practices which include **OSSTMM**, **OWASP**, and **NIST** for completing the assignment.

We found **INFOGISTIC** team technically sound and commendable for conducting the assignment according to its true spirit. Moreover, team's noteworthy communication and project management skills were also critical for the successful closure of the assignment.

We strongly recommend **INFOGISTIC** for Penetration Testing/Cyber Security and related assignments and look forward to execute similar assignments with them.
